IP65 TEST REPORT

DB6 BELL

INTRODUCTION

The above unit is manufactured from cast iron boxes. The seal of the unit depends upon the grease applied to the FLP faces.

METHOD IPx5

The test was to be done in compliance with BS EN 60529:1992.
The jet was aimed at the joint between the cover and case, then turned over and the jet was aimed at the armature spindle.

RESULTS IPx5

No ingress of water was found after the test was completed.

CONCLUSION

The unit passed the test.

METHOD IP6

Upon completion of the IPx5 test it can be assumed that as there was no ingress of water in the unit, there will be no ingress of dust. Therefore the IP6 test was not done.
